DATA SOURCES: Certificates for live births and fetal deaths provided by the DOH Center for Health Statistics and included in the First Steps Database. Medicaid status was determined by individual-level linkage to Medicaid claims and eligibility performed by the First Steps Database. **2012 birth data are preliminary.** SFY=State Fiscal Year (ends June 30 of reference year)

Excludes births in military facilities. C-Sections NTSV exclude cases where mother was transferred to higher level care for maternal medical or fetal indicators for delivery, or hospital births where intended place of birth was other than hospital.

Total Deliveries includes live births and fetal deaths after 20 weeks' gestation. **Medicaid** refers to births to women who received Medicaid-paid maternity care. **C-Sections (NTSV)** is the percent of cesarean sections among nulliparous, term, singleton, liveborn, vertex deliveries. **Vaginal Births After Cesarean (VBAC)** is the percent of vaginal births among live births to appropriate candidates. Women whose pregnancies were at term, had a single fetus with vertex presentation, and who had one prior c-section were considered **appropriate candidates for VBAC**. Number of prior c-sections is determined by longitudinal linkage and may undercount c-sections performed in other states or for other births not in the source data. **Chart** comparison VBAC Rates are limited to hospitals that offer planned vaginal birth delivery after a prior cesarean section (VBAC).
